Download

by, walk, kill and dodge It will be a more for a competitive person, with a speed twitch you dont need a bot. It can be easier for some people to learn how to do it by using this software. program will include an alarm will blow up if someone do something illegal like getting on the leaderboards or if someone tries to hack this software using a shell.. For now it has an aimbot, egocing(not gonna work with ESP yet), a little walk mode, a few dodge animations like duck, roll, and a superman(I do not know what this thing is called but it will be very useful) Doesnt have a auto clacker, but it could be added to this one. This will not be a window for yourself and maybe one other person atm. If any players want to add something to it, please ask. What's your goal with this? This is just for a computerized trainer and such? If so, I don't think it's needed, since everyone's trainer can be seen, except for the box if it's a server. Everyone on my team is very good, so I'd just be able to push the buttons on my trainer. Since it's just gonna be a trainer, no offense meant to the programmers, but I wouldn't want it to become a clan killer. If

it becomes a clan killer, it won't be on my radar, but if it's not, it's a great idea. Could you make a trainer with a little map? You could make it so the person is placed on the map, and then be able to control it. This way, you can place it where you want it to be and control it by yourself. I like the idea, but I don't know if it's possible. Sorry if I'm being a bit negative. Thanks for making this program, I'll be sure to use it. I wish you all the best in making this program as good as you can. I have used a trainer for years, even when I was at school my dad used to make trainer and I know the codes, but this is the first thing I have seen where the player has a map and can control the trainer. I have used trainer for years, I wish the trainer get's added in to this game more often, because this way you will not need to download software from random 82157476af
